

PART III

PLATO: PHILOSOPHY AS THE REGROWTH OF WINGS

Plato (c.428–348 B.C.E.), the founder of the Academy at Athens, is regarded as the supreme spokesman of the Hellenic philosophical tradition. He exercised great artistry in the presentation of his ideas and became a source of inspiration to many forms of mysticism. In a certain respect Plato can also be viewed as one of the most important Pythagorean thinkers in Greece.

It is usually held that the European philosophical tradition consists of a series of footnotes to Plato; and yet there exist some trustworthy scholars who question the European claim of having exclusive rights to the classical Hellenic inheritance in general and of Plato (be he regarded as “Pythagorean,” “Socratic,” or even “Neoplatonic”) in particular. The ancient Hellenes, this group are wont to argue, have been uncritically identified as “Westerners” by precisely those Western rationalists and humanists who, by reason of their own intellectual poverty, ceaselessly tried to invent—in retrospective—their own glorious past. In this way, it is claimed, they sought to find a kind of “archetypal” support for their rationalistic program of “enlightenment,” which was set up in contradistinction to the hated “Oriental darkness” (exemplified especially by the Islamic, and to a lesser extent, traditional Byzantine civilizations). For this sinister purpose the philosophy of Plato was artificially separated not only from its Egyptian and Orphic mythological roots, but from the later Middle Platonic and Neoplatonic traditions of exegesis too. Now, an understanding of Plato depends largely on an interpretation of his thought; but this interpretation need not necessarily be “Western”—even though the “official” view remains that of an amalgam of biases from late Christian (Protestant), Humanist and partly corrupted Classicist sources.

For Plato, philosophy was a practice of and for death; a discipline of immortality aimed at the purification and separation of the soul—which was no longer regarded as the illusory phantom

The Golden Chain

(*eidolon*) of the body, but as the immortal *psuche*—and which was now considered as the very essence of the being. By shifting the emphasis from the mortal body to the immortal soul, Plato initiated a philosophically oriented *paideia*, the final goal of which was a learning to live according to the highest metaphysical truth and virtue, to be attained by imitating God, the cause of all blessedness. Through an association with that which is divine—the good, beautiful and orderly (*kosmios*)—the philosopher attained to divinity and orderliness (*kosmios*). This was a way of life based on philosophy as presented by Pythagoras; but it would be wrong to suppose that Plato was in this way the only and inevitable route for all the earlier Hellenic and Oriental traditions that passed down to late antiquity.

Among the basic premises of Plato's philosophy was the distinction between two orders of reality, Being and Becoming. The real noetic world, the realm of Being (or Being, Life, and Intelligence, according to the later commentators) contained the immaterial, eternal and unchanging Forms (*eide*). The realm of Becoming, by contrast, contained the shifting phenomena of the world, which were but imperfect imitations or copies of the Forms, i.e., the world of Becoming contained all sensible things about which no certain scientific knowledge was possible. The Platonic Forms were noetic paradigms, archetypes, and universals arranged in a hierarchy, crowned by the Form of the Good (or Beauty). They constituted the only true objects of divine knowledge. In the myth of *Phaedrus* they were contemplated by the charioteers of souls before they crashed into the world of Becoming, and were thereafter unable to contemplate the Ideas directly. In principle, the Platonic Forms or Ideas, were "Platonic" and somewhat "new" only in respect of their systematic rational formulation and philosophical expression. In their mythological and theological dresses (intimately related to corresponding hieratic rites), the so-called theory of Ideas and Archetypes can be traced back to the ancient Egyptian and Sumerian cosmogonies. Plato received this doctrine in its semi-Pythagorean form, along with conceptions of the ultimate metaphysical principles (the One, Limit, and Unlimited), Form and Matter—woven together through numerical harmony and the doctrine of the tripartite soul. But one ought to remember that Pythagoras, as a son of Apollo or even Apollo himself incarnated in human form (and thus tantamount to the Egyptian Horus), was "nameless" and his personal identity a mystery. It should also be

Plato: Philosophy as the Regrowth of Wings

noted that Plato wanted to be seen as an heir to Parmenides, a priest of Apollo the Healer, although he somewhat transformed or even rationally distorted both the Parmenidian *paradosis* and the primordial vision of the ancient sages.

According to Plato, the visible cosmos is “a shrine brought into being for the everlasting gods” (*ton aidion theon gegonos agalma*), a living and self-moved creature modeled according to the pattern of the Intelligible Living Being (i.e., the realm of Ideas, *kosmos noetos*) that is forever existent. The divine Demiurge models the world of Becoming on the world of Being, described as a complex system of Forms containing within itself all subordinate Forms whose likeness one can trace here below. Plato drew a close correspondence between macrocosm and microcosm, that is, between the structure of the entire noetic, psychic and material cosmos and the structure of the human being. The cosmological and metaphysical circles of Sameness and Difference were thus present both in the World Soul and the human soul. But, due to its broken wings the human soul had to leave the divine procession and descend to the realm of *genesis*. The task of the philosopher was thus to regrow his wings and to pass from the shadows of the sensible world to the divine realm, and to contemplate not the remote images, or shadows, but the Forms, or realities, themselves. This was the spiritual and intellectual way of recollection (*anamnesis*) which constituted the heart of Platonic philosophy.

The ascent, or rather re-ascent, of the soul to its original abode had many stages and demanded both intellectual and erotic training. In this respect, the philosopher was also the ideal lover who was led by examples of beauty in the realm of sense—by symbols and sacred images—to the blissful contemplation of the Form of Beauty itself—a mystical vision of Reality which was incommunicable. Having a daemonic and intermediate nature, Eros was one of the links between the sensible cosmos and the eternal world of the gods. Accordingly, Eros was regarded as a paradigm and pattern for the philosopher, or lover of wisdom, because wisdom was beautiful and beauty was loveable. He was attached to both worlds and could move in both directions: downward and upward. The stages of philosophical ascent led from the love of particular physical beauty to physical beauty in general; thence to beauty of soul separated from the beauty of the body and so on. Finally, the beauty of divine knowledge was reached and the vision of the Form of Beauty itself

The Golden Chain

was granted. In Plato's *Symposium*, the priestess Diotima describes this ascent in terms borrowed from the Eleusinian mysteries, because essentially it is the same ascent, consistent with all religious experience. It is a gradual elevation and illumination comparable to the stages of an initiation where the culminating revelation or the final vision (*epopteia*) transcends discursive thought and reason altogether. No wonder that Plato's *Phaedrus* and *Symposium* provided certain models for the theurgic ascent; and in fact these crucial accounts, masterfully introduced as they are by Plato, themselves imitate the ancient cultic patterns recognizable in Mesopotamian and Egyptian cosmogonical rites. Thus it is that the guide of the soul in philosophy corresponds to the hierophant of the mysteries.

Plato's Dialogues and Letters

Plato stands with Pythagoras, Parmenides, Socrates and Aristotle as one of the most eminent thinkers of the ancient Hellenic tradition. He may be regarded as the father of both Western and Eastern (Byzantine, Islamic) philosophy. Born into a renowned family, he had a wide acquaintance with the scholars and sages of his time. He traveled extensively abroad and—according to numerous testimonies—studied in the Egyptian temples (or so-called Houses of Life), in this respect following the example of such men as Solon, Thales of Miletus, and Pythagoras. At the age of forty Plato founded the Academy in Athens. He himself was a disciple and admirer of Socrates, who became the main character and spokesman of his dialogues. Being both a mathematician in the Pythagorean fashion and a master of dialectics, Plato believed the cosmos to be pervaded by divine goodness and beauty. He developed the theory of Ideas, or Forms, which were regarded as the archetypal principles, divine numbers, and formative forces of the entire reality at all ontological levels. The Form of the Good itself was beyond Being (*epekeina tes ousias*); however, every concrete being depended on, and was turned towards, this supernal Sun, the source of truth and beauty, life and intelligence.

Plato's writings allowed him to lead his students at the Academy to metaphysical insights through dialectical exercises, scientific studies, meditations, rational speculations, and mythical imagination. As a perfect stylist he used both rational discourse and poetical imagery; but he never subordinated meaning to the outer form.

Presented here are but a few excerpts from the well-known dialogues of Plato. They concern Pythagorean cosmology; mythologized accounts of

Plato: Philosophy as the Regrowth of Wings

the human soul and its destiny; the main task and nature of philosophy (understood as a love of wisdom and preparation for death); the crucial role of Eros in the ascent to the realm of the eternal Ideas; and the impotence of human language to give adequate expression to profound metaphysical, or theological, truths.

The excerpts from the *Seventh Letter* were rendered by L.A. Post (1925); from *Timaeus* by B. Jowett (1953, 4th ed.); from *Phaedrus* by R. Hackforth (1952); from *Phaedo* by H. Tredennick (1954); from *Theaetetus* by F.M. Cornford (1935); and from *Symposium* by M. Joyce (1935).

i. *Seventh Letter* 342c–344d

... For everything that exists there are three classes of objects through which knowledge about it must come; the knowledge itself is a fourth, and we must put as a fifth entity the actual object of knowledge which is the true reality. We have then, first, a name, second, a description, third, an image, and fourth, a knowledge of the object. Take a particular case if you want to understand the meaning of what I have just said; then apply the theory to every object in the same way. There is something for instance called a circle, the name of which is the very word I just now uttered. In the second place there is a description of it which is composed of nouns and verbal expressions. For example the description of that which is named “round” and “circumference” and “circle” would run as follows: the thing which has everywhere equal distances between its extremities and its center. In the third place there is the class of object which is drawn and erased and turned on the lathe and destroyed—processes which do not affect the real circle to which these other circles are all related, because it is different from them. In the fourth place there are knowledge and understanding and correct opinion concerning them, all of which we must set down as one thing more that is found not in sounds nor in shapes of bodies, but in minds, whereby it evidently differs in its nature from the real circle and from the aforementioned three. Of all these four, understanding approaches nearest in affinity and likeness to the fifth entity, while the others are more remote from it.

The same doctrine holds good in regard to shapes and surfaces, both straight and curved, in regard to the good and the beautiful and the just, in regard to all bodies artificial and natural, in regard to fire and water and the like, and in regard to every animal, and in regard

The Golden Chain

to every quality of character, and in respect to all states active and passive. For if in the case of any of these a man does not somehow or other get hold of the first four, he will never gain a complete understanding of the fifth. Furthermore these four [names, descriptions, bodily forms, concepts] do as much to illustrate the particular quality of any object as they do to illustrate its essential reality because of the inadequacy of language. Hence no intelligent man will ever be so bold as to put into language those things which his reason has contemplated, especially not into a form that is unalterable—which must be the case with what is expressed in written symbols.

Again, however, the meaning of what has just been said must be explained. Every circle that is drawn or turned on a lathe in actual operations abounds in the opposite of the fifth entity, for it everywhere touches the straight, while the real circle, I maintain, contains in itself neither much nor little of the opposite character. Names, I maintain, are in no case stable. Nothing prevents the things that are now called round from being called straight and the straight round, and those who have transposed the names and use them in the opposite way will find them no less stable than they are now. The same thing for that matter is true of a description, since it consists of nouns and of verbal expressions, so that in a description there is nowhere any sure ground that is sure enough. One might, however, speak forever about the inaccurate character of each of the four! The important thing is that, as I said a little earlier, there are two things, the essential reality and the particular quality, and when the mind is in quest of knowledge not of the particular but of the essential, each of the four confronts the mind with the unsought particular, whether in verbal or in bodily form. Each of the four makes the reality that is expressed in words or illustrated in objects liable to easy refutation by the evidence of the senses. The result of this is to make practically every man a prey to complete perplexity and uncertainty.

Now in cases where as a result of bad training we are not even accustomed to look for the real essence of anything but are satisfied to accept what confronts us in the phenomenal presentations, we are not rendered ridiculous by each other—the examined by the examiners, who have the ability to handle the four with dexterity and to subject them to examination. In those cases, however, where we demand answers and proofs in regard to the fifth entity, anyone who pleases among those who have skill in confutation gains the vic-

Plato: Philosophy as the Regrowth of Wings

tory and makes most of the audience, who think that the man who was first to speak or write or answer has no acquaintance with the matters of which he attempts to write or speak. Sometimes they are unaware that it is not the mind of the writer or speaker that fails in the test, but rather the character of the four—since that is naturally defective. Consideration of all of the four in turn—moving up and down from one to another—barely begets knowledge of a naturally flawless object in a naturally flawless man. If a man is naturally defective—and this is the natural state of most people’s minds with regard to intelligence and to what are called morals—while the objects he inspects are tainted with imperfection, not even Lynceus could make such a one see.

To sum it all up in one word, natural intelligence and a good memory are equally powerless to aid the man who has not an inborn affinity with the subject. Without such endowments there is of course not the slightest possibility. Hence all who have no natural aptitude for and affinity with justice and all the other noble ideals, though in the study of other matters they may be both intelligent and retentive—all those too who have affinity but are stupid and unretentive—such will never any of them attain to an understanding of the most complete truth in regard to moral concepts. The study of virtue and vice must be accompanied by an inquiry into what is false and true of existence in general and must be carried on by constant practice throughout a long period, as I said in the beginning. Hardly after practicing detailed comparisons of names and definitions and visual and other sense perceptions, after scrutinizing them in benevolent disputation by the use of question and answer without jealousy, at last in a flash understanding of each blazes up, and the mind, as it exerts all its powers to the limit of human capacity, is flooded with light.

For this reason no serious man will ever think of writing about serious realities for the general public so as to make them a prey to envy and perplexity. In a word, it is an inevitable conclusion from this that when anyone sees anywhere the written work of anyone, whether that of a lawgiver in his laws or whatever it may be in some other form, the subject treated cannot have been his most serious concern—that is, if he is himself a serious man. His most serious interests have their abode somewhere in the noblest region of the field of his activity. If, however, he really was seriously concerned with these matters and put them in writing, “then surely” not the gods, but mortals “have utterly blasted his wits” (*Iliad*, 7.360).

The Golden Chain

ii. *Timaeus* 27c–31b

TIMAEUS: All men, Socrates, who have any degree of right feeling, at the beginning of every enterprise, whether small or great, always call upon God. And we, too, who are going to discourse of the nature of the universe, how created or how existing without creation, if we be not altogether out of our wits, must invoke the aid of gods and goddesses and pray that our words may be above all acceptable to them and in consequence to ourselves. Let this, then, be our invocation of the gods, to which I add an exhortation of myself to speak in such manner as will be most intelligible to you, and will most accord with my own intent.

First then, in my judgment, we must make a distinction and ask, What is that which always is and has no becoming, and what is that which is always becoming and never is? That which is apprehended by intelligence and reason is always in the same state, but that which is conceived by opinion with the help of sensation and without reason is always in a process of becoming and perishing and never really is. Now everything that becomes or is created must of necessity be created by some cause, for without a cause nothing can be created. The work of the creator, whenever he looks to the unchangeable and fashions the form and nature of his work after an unchangeable pattern, must necessarily be made fair and perfect, but when he looks to the created only and uses a created pattern, it is not fair or perfect. Was the heaven then or the world, whether called by this or by any other more appropriate name—assuming the name, I am asking a question which has to be asked at the beginning of an inquiry about anything—was the world, I say, always in existence and without beginning, or created, and had it a beginning? Created, I reply, being visible and tangible and having a body, and therefore sensible, and all sensible things are apprehended by opinion and sense, and are in a process of creation and created. Now that which is created must, as we affirm, of necessity be created by a cause. But the father and maker of all this universe is past finding out, and even if we found him, to tell of him to all men would be impossible. This question, however, we must ask about the world. Which of the patterns had the artificer in view when he made it—the pattern of the unchangeable or of that which is created? If the world be indeed fair and the artificer good, it is manifest that he must have looked to that which is eternal, but if what cannot be said

Plato: Philosophy as the Regrowth of Wings

without blasphemy is true, then to the created pattern. Everyone will see that he must have looked to the eternal, for the world is the fairest of creations and he is the best of causes. And having been created in this way, the world has been framed in the likeness of that which is apprehended by reason and mind and is unchangeable, and must therefore of necessity, if this is admitted, be a copy of something. Now it is all-important that the beginning of everything should be according to nature. And in speaking of the copy and the original we may assume that words are akin to the matter which they describe; when they relate to the lasting and permanent and intelligible, they ought to be lasting and unalterable, and, as far as their nature allows, irrefutable and invincible—nothing less. But when they express only the copy or likeness and not the eternal things themselves, they need only be likely and analogous to the former words. As being is to becoming, so is truth to belief. If then, Socrates, amidst the many opinions about the gods and the generation of the universe, we are not able to give notions which are altogether and in every respect exact and consistent with one another, do not be surprised. Enough if we adduce probabilities as likely as any others, for we must remember that I who am the speaker and you who are the judges are only mortal men, and we ought to accept the tale which is probable and inquire no further.

SOCRATES: Excellent, Timaeus, and we will do precisely as you bid us. The prelude is charming and is already accepted by us; may we beg of you to proceed to the strain?

TIMAEUS: Let me tell you then why the creator made this world of generation. He was good, and the good can never have any jealousy of anything. And being free from jealousy, he desired that all things should be as like himself as they could be. This is in the truest sense the origin of creation and of the world, as we shall do well in believing on the testimony of wise men. God desired that all things should be good and nothing bad, so far as this was attainable. Wherefore also finding the whole visible sphere not at rest, but moving in an irregular and disorderly fashion, out of disorder he brought order, considering that this was in every way better than the other. Now the deeds of the best could never be or have been other than the fairest, and the creator, reflecting on the things which are by nature visible, found that no unintelligent creature taken as a whole could ever be fairer than the intelligent taken as a whole, and

The Golden Chain

again that intelligence could not be present in anything which was devoid of soul. For which reason, when he was framing the universe, he put intelligence in soul, and soul in body, that he might be the creator of a work which was by nature fairest and best. On this wise, using the language of probability, we may say that the world came into being—a living creature truly endowed with soul and intelligence by the providence of God.

This being supposed, let us proceed to the next stage. In the likeness of what animal did the creator make the world? It would be an unworthy thing to liken it to any nature which exists as a part only, for nothing can be beautiful which is like any imperfect thing. But let us suppose the world to be the very image of that whole of which all other animals, both individually and in their tribes, are portions. For the original of the universe contains in itself all intelligible beings, just as this world comprehends us and all other visible creatures. For the deity, intending to make this world like the fairest and most perfect of intelligible beings, framed one visible animal comprehending within itself all other animals of a kindred nature. Are we right in saying that there is one world, or that they are many and infinite? There must be one only if the created copy is to accord with the original. For that which includes all other intelligible creatures cannot have a second or companion; in that case there would be need of another living being which would include both, and of which they would be parts, and the likeness would be more truly said to resemble not them, but that other which included them. In order then that the world might be solitary, like the perfect animal, the creator made not two worlds or an infinite number of them, but there is and ever will be one only-begotten and created heaven.

37c–44c

TIMAEUS: When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods, he rejoiced, and in his joy determined to make the copy still more like the original, and as this was an eternal living being, he sought to make the universe eternal, so far as might be. Now the nature of the ideal being was everlasting, but to bestow this attribute in its full-

Plato: Philosophy as the Regrowth of Wings

ness upon a creature was impossible. Wherefore he resolved to have a moving image of eternity, and when he set in order the heaven, he made this image eternal but moving according to number, while eternity itself rests in unity, and this image we call time. For there were no days and nights and months and years before the heaven was created, but when he constructed the heaven he created them also. They are all parts of time, and the past and future are created species of time, which we unconsciously but wrongly transfer to eternal being, for we say that it "was," or "is," or "will be," but the truth is that "is" alone is properly attributed to it, and that "was" and "will be" are only to be spoken of becoming in time, for they are motions; but that which is immovably the same forever cannot become older or younger by time, nor can it be said that it came into being in the past, or has come into being now, or will come into being in the future, nor is it subject at all to any of those states which affect moving and sensible things and of which generation is the cause. These are the forms of time, which imitates eternity and revolves according to a law of number. Moreover, when we say that what has become *is* become and what becomes *is* becoming, and that what will become *is* about to become and that the nonexistent *is* nonexistent—all these are inaccurate modes of expression. But perhaps this whole subject will be more suitably discussed on some other occasion.

Time, then, and the heaven came into being at the same instant in order that, having been created together, if ever there was to be a dissolution of them, they might be dissolved together. It was framed after the pattern of the eternal nature—that it might resemble this as far as was possible, for the pattern exists from eternity, and the created heaven has been and is and will be in all time. Such was the mind and thought of God in the creation of time. The sun and moon and five other stars, which are called the planets, were created by him in order to distinguish and preserve the numbers of time, and when he had made their several bodies, he placed them in the orbits in which the circle of the other was revolving—in seven orbits seven stars. First, there was the moon in the orbit nearest the earth, and the next the sun, in the second orbit above the earth, then came the morning star and the star said to be sacred to Hermes, moving in orbits which have an equal swiftness with the

The Golden Chain

sun, but in an opposite direction, and this is the reason why the sun and Hermes and Lucifer¹ regularly overtake and are overtaken by each other. To enumerate the places which he assigned to the other stars and to give all the reasons why he assigned them, although a secondary matter, would give more trouble than the primary. These things at some future time, when we are at leisure, may have the consideration which they deserve, but not at present.

Now, when each of the stars which were necessary to the creation of time had come to its proper orbit, and they had become living creatures having bodies fastened by vital chains, and learned their appointed task—moving in the motion of the diverse, which is diagonal and passes through and is governed by the motion of the same—they revolved, some in a larger and some in a lesser orbit, those which had the lesser orbit revolving faster, and those which had the larger more slowly. Now by reason of the motion of the same, those which revolved fastest appeared to be overtaken by those which moved slower although they really overtook them, for the motion of the same made them all turn in a spiral, and, because some went one way and some another, that which receded most slowly from the sphere of the same, which was the swiftest, appeared to follow it most nearly. That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits, that it might give light to the whole of heaven, and that the animals, as many as nature intended, might participate in number, learning arithmetic from the revolution of the same and the like. Thus, then, and for this reason the night and the day were created, being the period of the one most intelligent revolution. And the month is accomplished when the moon has completed her orbit and overtaken the sun, and the year when the sun has completed his own orbit. Mankind, with hardly an exception, have not remarked the periods of the other stars, and they have no name for them, and do not measure them against one another by the help of number, and hence they can scarcely be said to know that their wanderings, being of vast number and admirable

1. Phosphoros, or the Morning Star. This is an example of a regrettable fashion, once current among Western scholars, of rendering Greek names by their Latin equivalents.

Plato: Philosophy as the Regrowth of Wings

for their variety, make up time. And yet there is no difficulty in seeing that the perfect number of time fulfills the perfect year when all the eight revolutions, having their relative degrees of swiftness, are accomplished together and attain their completion at the same time, measured by the rotation of the same and equally moving. After this manner, and for these reasons, came into being such of the stars as in their heavenly progress received reversals of motion, to the end that the created heaven might be as like as possible to the perfect and intelligible animal, by imitation of its eternal nature.

Thus far and until the birth of time the created universe was made in the likeness of the original, but inasmuch as all animals were not yet comprehended therein, it was still unlike. Therefore, the creator proceeded to fashion it after the nature of the pattern in this remaining point. Now as in the ideal animal the mind perceives ideas or species of a certain nature and number, he thought that this created animal ought to have species of a like nature and number. There are four such. One of them is the heavenly race of the gods; another, the race of birds whose way is in the air; the third, the watery species; and the fourth, the pedestrian and land creatures. Of the heavenly and divine, he created the greater part out of fire, that they might be the brightest of all things and fairest to behold, and he fashioned them after the likeness of the universe in the figure of a circle, and made them follow the intelligent motion of the supreme, distributing them over the whole circumference of heaven, which was to be a true cosmos or glorious world spangled with them all over. And he gave to each of them two movements—the first, a movement on the same spot after the same manner, whereby they ever continue to think consistently the same thoughts about the same things, in the same respect; the second, a forward movement, in which they are controlled by the revolution of the same and the like—but by the other five motions they were unaffected, in order that each of them might attain the highest perfection. And for this reason the fixed stars were created, to be divine and eternal animals, ever abiding and revolving after the same manner and on the same spot, and the other stars which reverse their motion and are subject to deviations of this kind were created in the manner already described. The earth, which is our nurse, clinging around the pole which is extended through the universe, he framed to be the guardian and artificer of night and day, first and eldest of

The Golden Chain

gods that are in the interior of heaven. Vain would be the attempt to tell all the figures of them circling as in dance, and their juxtapositions, and the return of them in their revolutions upon themselves, and their approximations, and to say which of these deities in their conjunctions meet, and which of them are in opposition, and in what order they get behind and before one another, and when they are severally eclipsed to our sight and again reappear, sending terrors and intimations of the future to those who cannot calculate their movements—to attempt to tell of all this without a visible representation of the heavenly system would be labor in vain. Enough on this head, and now let what we have said about the nature of the created and visible gods have an end.

To know or tell the origin of the other divinities is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the gods—that is what they say—and they must surely have known their own ancestors. How can we doubt the word of the children of the gods? Although they give no probable or certain proofs, still, as they declare that they are speaking of what took place in their own family, we must conform to custom and believe them. In this manner, then, according to them, the genealogy of these gods is to be received and set forth.

Oceanus and Tethys were the children of Earth and Heaven, and from these sprang Phorcys and Cronus and Rhea, and all that generation, and from Cronus and Rhea sprang Zeus and Hera, and all those who are said to be their brethren, and others who were the children of these.

Now, when all of them, both those who visibly appear in their revolutions as well as those other gods who are, of a more retiring nature, had come into being, the creator of the universe addressed them in these words. Gods, children of gods, who are my works and of whom I am the artificer and father, my creations are indissoluble, if so I will. All that is bound may be undone, but only an evil being would wish to undo that which is harmonious and happy. Wherefore, since ye are but creatures, ye are not altogether immortal and indissoluble, but ye shall certainly not be dissolved, nor be liable to the fate of death, having in my will a greater and mightier bond than those with which ye were bound at the time of your birth. And now listen to my instructions. Three tribes of mortal beings remain to be created—without them the universe will be incomplete, for it will not contain

Plato: Philosophy as the Regrowth of Wings

every kind of animal which it ought to contain, if it is to be perfect. On the other hand, if they were created by me and received life at my hands, they would be on an equality with the gods. In order then that they may be mortal, and that this universe may be truly universal, do ye, according to your natures, betake yourselves to the formation of animals, imitating the power which was shown by me in creating you. The part of them worthy of the name immortal, which is called divine and is the guiding principle of those who are willing to follow justice and, you—of that divine part I will myself sow the seed, and having made a beginning, I will band the work over to you. And do ye then interweave the mortal with the immortal and make and beget living creatures, and give them food and make them to grow, and receive them again in death.

Thus he spoke, and once more into the cup in which he had previously mingled the soul of the universe he poured the remains of the elements, and mingled them in much the same manner; they were not, however, pure as before, but diluted to the second and third degree. And having made it he divided the whole mixture into souls equal in number to the stars and assigned each soul to a star, and having there placed them as in a chariot he showed them the nature of the universe and declared to them the laws of destiny, according to which their first birth would be one and the same for all—no one should suffer a disadvantage at his hands. They were to be sown in the instruments of time severally adapted to them, and—to come forth the most religious of animals, and as human nature was of two kinds, the superior race was of such and such a character, and would hereafter be called man. Now, when they should be implanted in bodies by necessity and be always gaining or losing some part of their bodily substance, then, in the first place, it would be necessary that they should all have in them one and the same faculty of sensation, arising out of irresistible impressions; in the second place, they must have love, in which pleasure and pain mingle—also fear and anger, and the feelings which are akin or opposite to them. If they conquered these they would live righteously, and if they were conquered by them, unrighteously. He who lived well during his appointed time was to return and dwell in his native star, and there he would have a blessed and congenial existence. But if he failed in attaining this, at the second birth he would pass into a woman, and if, when in that state of being, he did not

The Golden Chain

desist from evil, he would continually be changed into some brute who resembled him in the evil nature which he had acquired, and would not cease from his toils and transformations until he helped the revolution of the same and the like within him to draw in its train the turbulent mob of later accretions made up of fire and air and water and earth, and by this victory of reason over the irrational returned to the form of his first and better state. Having given all these laws to his creatures, that he might be guiltless of future evil in any of them, the creator sowed some of them in the earth, and some in the moon, and some in the other instruments of time. And when he had sown them he committed to the younger gods the fashioning of their mortal bodies, and desired them to furnish what was still lacking to the human soul, and having made all the suitable additions, to rule over them, and to pilot the mortal animal in the best and wisest manner which they could and avert from him all but self-inflicted evils.

When the creator had made all these ordinances he remained in his own accustomed nature, and his children heard and were obedient to their father's word, and receiving from him the immortal principle of a mortal creature, in imitation of their own creator they borrowed portions of fire and earth and water and air from the world, which were hereafter to be restored—these they took and welded them together, not with the indissoluble chains by which they were themselves bound, but with little pegs too small to be visible, making up out of all the four elements each separate body, and fastening the courses of the immortal soul in a body which was in a state of perpetual influx and efflux. Now these courses, detained as in a vast river, neither overcame nor were overcome, but were hurrying and hurried to and fro, so that the whole animal was moved and progressed, irregularly however and irrationally and anyhow, in all the six directions of motion, wandering backward and forward, and right and left, and up and down, and in all the six directions. For great as was the advancing and retiring flood which provided nourishment, the affections produced by external contact caused still greater tumult—when the body of anyone met and came into collision with some external fire or with the solid earth or the gliding waters, or was caught in the tempest borne on the air—and the motions produced by any of these impulses were carried through

Plato: Philosophy as the Regrowth of Wings

the body to the soul. All such motions have consequently received the general name of "sensations," which they still retain. And they did in fact at that time create a very great and mighty movement; uniting with the ever-flowing stream in stirring up and violently shaking the courses of the soul, they completely stopped the revolution of the same by their opposing current and hindered it from predominating and advancing, and they so disturbed the nature of the other or diverse that the three double intervals [that is, between 1, 2, 4, 8] and the three triple intervals [that is, between 1, 3, 9, 27], together with the mean terms and connecting links which are expressed by the ratios of 3:2 and 4:3 and of 9:8—these, although they cannot be wholly undone except by him who united them, were twisted by them in all sorts of ways, and the circles were broken and disordered in every possible manner, so that when they moved they were tumbling to pieces and moved irrationally, at one time in a reverse direction, and then again obliquely, and then upside down, as you might imagine a person who is upside down and has his head leaning upon the ground and his feet up against something in the air, and when he is in such a position, both he and the spectator fancy that the right of either is his left, and the left right. If, when powerfully experiencing these and similar effects, the revolutions of the soul come in contact with some external thing, either of the class of the same or of the other, they speak of the same or of the other in a manner the very opposite of the truth, and they become false and foolish, and there is no course or revolution in them which has a guiding or directing power. And if again any sensations enter in violently from without and drag after them the whole vessel of the soul, then the courses of the soul, though they seem to conquer, are really conquered.

And by reason of all these affections, the soul, when incased in a mortal body, now, as in the beginning, is at first without intelligence, but when the flood of growth and nutriment abates and the courses of the soul, calming down, go their own way and become steadier as time goes on, then the several circles return to their natural form and their revolutions are corrected, and they call the same and the other by their right names and make the possessor of them to become a rational being. And if these combine in him with

The Golden Chain

any true nurture or education, he attains the fullness and health of the perfect man, and escapes the worst disease of all, but if he neglects education he walks lame to the end of his life and returns imperfect and good for nothing to the world below.²

iii. *Phaedrus* 244a–253c

SOCRATES: Now you must understand, fair boy, that whereas the preceding discourse was by Phaedrus, son of Pythocles, of Myrrhinus, that which I shall now pronounce is by Stesichorus, son of Euphemus, of Himera. This then is how it must run.

“False is the tale” that when a lover is at hand favor ought rather to be accorded to one who does not love, on the ground that the former is mad, and the latter sound of mind. That would be right if it were an invariable truth that madness is an evil, but in reality, the greatest blessings come by way of madness, indeed of madness that is heaven-sent. It was when they were mad that the prophetess at Delphi and the priestesses at Dodona achieved so much for which both states and individuals in Greece are thankful; when sane they did little or nothing. As for the Sibyl and others who by the power of inspired prophecy have so often foretold the future to so many, and guided them aright, I need not dwell on what is obvious to everyone. Yet it is in place to appeal to the fact that madness was accounted no shame nor disgrace by the men of old who gave things their names; otherwise they would not have connected that greatest of arts, whereby the future is discerned, with this very word “madness,” and named it accordingly. No, it was because they held madness to be a valuable gift, when due to divine dispensation, that they named that art as they did, though the men of today, having no sense of values, have put in an extra letter, making it not *manic* but *mantic*. That is borne out by the name they gave to the art of those sane prophets who inquire into the future by means of birds and other signs; the name was *oionoistic* which by its components indicated that the prophet attained understanding and information by

2. For more on Plato’s cosmology see Francis MacDonald Cornford, *Plato’s Cosmology: The Timaeus of Plato* (Indianapolis and Cambridge, Mass.: Hackett Publishing Company, 1997).

Plato: Philosophy as the Regrowth of Wings

a purely human activity of thought belonging to his own intelligence, though a younger generation has come to call it *oionistic*, lengthening the quantity of the *o* to make it sound impressive. You see then what this ancient evidence attests. Corresponding to the superior perfection and value of the prophecy of inspiration over that of omen reading, both in name and in fact, is the superiority of heaven-sent madness over man-made sanity.

And in the second place, when grievous maladies and afflictions have beset certain families by reason of some ancient sin, madness has appeared among them, and breaking out into prophecy has secured relief by finding the means thereto, namely by recourse to prayer and worship, and in consequence thereof rites and means of purification were established, and the sufferer was brought out of danger, alike for the present and for the future. Thus did madness secure, for him that was maddened aright and possessed, deliverance from his troubles.

There is a third form of possession or madness, of which the Muses are the source. This seizes a tender, virgin soul and stimulates it to rapt passionate expression, especially in lyric poetry, glorifying the countless mighty deeds of ancient times for the instruction of posterity. But if any man come to the gates of poetry without the madness of the Muses, persuaded that skill alone will make him a good poet, then shall he and his works of sanity with him be brought to nought by the poetry of madness, and behold, their place is nowhere to be found.

Such then is the tale, though I have not told it fully, of the achievements wrought by madness that comes from the gods. So let us have no fears simply on that score; let us not be disturbed by an argument that seeks to scare us into preferring the friendship of the sane to that of the passionate. For there is something more that it must prove if it is to carry the day, namely that love is not a thing sent from heaven for the advantage both of lover and beloved. What we have to prove is the opposite, namely that this sort of madness is a gift of the gods, fraught with the highest bliss. And our proof assuredly will prevail with the wise, though not with the learned.

Now our first step toward attaining the truth of the matter is to discern the nature of soul, divine and human, its experiences, and its activities. Here then our proof begins.

The Golden Chain

All soul is immortal,³ for that which is ever in motion is immortal. But that which while imparting motion is itself moved by something else can cease to be in motion, and therefore can cease to live; it is only that which moves itself that never intermits its motion, inasmuch as it cannot abandon its own nature; moreover this self-mover is the source and first principle of motion for all other things that are moved. Now a first principle cannot come into being, for while anything that comes to be must come to be from a first principle, the latter itself cannot come to be from anything whatsoever; if it did, it would cease any longer to be a first principle. Furthermore, since it does not come into being, it must be imperishable, for assuredly if a first principle were to be destroyed, nothing could come to be out of it, nor could anything bring the principle itself back into existence, seeing that a first principle is needed for anything to come into being.

The self-mover, then, is the first principle of motion, and it is as impossible that it should be destroyed as that it should come into being were it otherwise; the whole universe, the whole of that which comes to be, would collapse into immobility, and never find another source of motion to bring it back into being.

And now that we have seen that that which is moved by itself is immortal, we shall feel no scruple in affirming that precisely that is the essence and definition of soul, to wit, self-motion. Any body that has an external source of motion is soulless, but a body deriving its motion from a source within itself is animate or *besouled* which implies that the nature of soul is what has been said.

And if this last assertion is correct, namely that “that which moves itself” is precisely identifiable with soul, it must follow that soul is not born and does not die.

3. Or “the soul as a whole (*psuche pasa*) is immortal,” as suggested by Ulrich von Wilamovitz-Moellendorf. Since the time of Hermeias of Alexandria, the interpreters have disputed over whether the meaning of *psuche pasa* is “all soul” or “every soul.” In 246b6, *psuche pasa* appears as a complete being having wings, which stands in contrast to the soul which has lost its wings. The translation of *psuche pasa* as “the soul as a whole,” stresses the difference between the complete immortal and incomplete mortal. As Yoav Rinon explains (p. 558): “The immortal has both a body and a soul which exist forever as a complete phenomenon. By contrast, the living being which is an outcome of an arbitrary connection between body and soul, has only a temporal completeness, which merely serves as a means for the new growth of the wings.” See Yoav Rinon, “The Rhetoric of Jacques Derrida II: Phaedrus,” *The Review of Metaphysics*, vol. XLVI, 3 (1993): 537–558.

Plato: Philosophy as the Regrowth of Wings

As to soul's immortality then we have said enough, but as to its nature there is this that must be said. What manner of thing it would be a long tale to tell, and most assuredly a god alone could tell it but what it resembles, that a man might tell in briefer compass. Let this therefore be our manner of discourse. Let it be likened to the union of powers in a team of winged steeds and their winged charioteer. Now all the gods' steeds and all their charioteers are good, and of good stock, but with other beings it is not wholly so. With us men, in the first place, it is a pair of steeds that the charioteer controls; moreover one of them is noble and good, and of good stock, while the other has the opposite character, and his stock is opposite. Hence the task of our charioteer is difficult and troublesome.

And now we must essay to tell how it is that living beings are called mortal and immortal. All soul has the care of all that is inanimate, and traverses the whole universe, though in ever-changing forms. Thus when it is perfect and winged it journeys on high and controls the whole world, but one that has shed its wings sinks down until it can fasten on something solid, and settling there it takes to itself an earthly body which seems by reason of the soul's power to move itself. This composite structure of soul and body is called a living being, and is further termed "mortal"; "immortal" is a term applied on no basis of reasoned argument at all, but our fancy pictures the god whom we have never seen, nor fully conceived, as an immortal living being, possessed of a soul and a body united for all time. Howbeit, let these matters, and our account thereof, be as God pleases; what we must understand is the reason why the soul's wings fall from it, and are lost. It is on this wise.

The natural property of a wing is to raise that which is heavy and carry it aloft to the region where the gods dwell, and more than any other bodily part it shares in the divine nature, which is fair, wise, and good, and possessed of all other such excellences. Now by these excellences especially is the soul's plumage nourished and fostered, while by their opposites, even by ugliness and evil, it is wasted and destroyed. And behold, there in the heaven Zeus, mighty leader, drives his winged team. First of the host of gods and daemons he proceeds, ordering all things and caring therefore, and the host follows after him, marshaled in eleven companies. For Hestia abides alone in the gods' dwelling place, but for the rest, all such as are

The Golden Chain

ranked in the number of the twelve as ruler gods lead their several companies, each according to his rank.

Now within the heavens are many spectacles of bliss upon the highways whereon the blessed gods pass to and fro, each doing his own work, and with them are all such as will and can follow them, for jealousy has no place in the choir divine. But at such times as they go to their feasting and banquet, behold they climb the steep ascent even unto the summit of the arch that supports the heavens, and easy is that ascent for the chariots of the gods, for they are well balanced and readily guided. But for the others it is hard, by reason of the heaviness of the steed of wickedness, which pulls down his driver with his weight, except that driver have schooled him well.

And now there awaits the soul the extreme of her toil and struggling. For the souls that are called immortal, so soon as they are at the summit, come forth and stand upon the back of the world, and straightway the revolving heaven carries them round, and they look upon the regions without.

Of that place beyond the heavens none of our earthly poets has yet sung, and none shall sing worthily. But this is the manner of it, for assuredly we must be bold to speak what is true, above all when our discourse is upon truth. It is there that true being dwells, without color or shape, that cannot be touched; reason alone, the soul's pilot, can behold it, and all true knowledge is knowledge thereof. Now even as the mind of a god is nourished by reason and knowledge, so also is it with every soul that has a care to receive her proper food; wherefore when at last she has beheld being she is well content, and contemplating truth she is nourished and prospers, until the heaven's revolution brings her back full circle. And while she is borne round she discerns justice, its very self, and likewise temperance, and knowledge, not the knowledge that is neighbor to becoming and varies with the various objects to which we commonly ascribe being, but the veritable knowledge of being that veritably is. And when she has contemplated likewise and feasted upon all else that has true being, she descends again within the heavens and comes back home. And having so come, her charioteer sets his steeds at their manger, and puts ambrosia before them and draught of nectar to drink withal.

Such is the life of gods. Of the other souls that which best follows a god and becomes most like thereunto raises her charioteer's head into the outer region and is carried round with the gods in the

Plato: Philosophy as the Regrowth of Wings

revolution, but being confounded by her steeds she has much ado to discern the things that are; another now rises, and now sinks, and by reason of her unruly steeds sees in part, but in part sees not. As for the rest, though all are eager to reach the heights and seek to follow, they are not able; sucked down as they travel they trample and tread upon one another, this one striving to outstrip that. Thus confusion ensues, and conflict and grievous sweat. Whereupon, with their charioteers powerless, many are lamed, and many have their wings all broken, and for all their toiling they are balked, every one, of the full vision of being, and departing therefrom they feed upon the food of semblance.

Now the reason wherefore the souls are fain and eager to behold the plain of Truth, and discover it, lies herein—to wit, that the pasturage that is proper to their noblest part comes from that meadow, and the plumage by which they are borne aloft is nourished thereby.

Hear now the ordinance of Necessity. Whatsoever soul has followed in the train of a god, and discerned something of truth, shall be kept from sorrow until a new revolution shall begin, and if she can do this always, she shall remain always free from hurt. But when she is not able so to follow, and sees none of it, but meeting with some mischance comes to be burdened with a load of forgetfulness and wrongdoing, and because of that burden sheds her wings and falls to the earth, then thus runs the law. In her first birth she shall not be planted in any brute beast, but the soul that hath seen the most of being shall enter into the human babe that shall grow into a seeker after wisdom or beauty, a follower of the Muses and a lover; the next, having seen less, shall dwell in a king that abides by law, or a warrior and ruler; the third in a statesman, a man of business, or a trader; the fourth in an athlete, or physical trainer, or physician; the fifth shall have the life of a prophet or a Mystery priest; to the sixth that of a poet or other imitative artist shall be fittingly given; the seventh shall live in an artisan or farmer; the eighth in a Sophist or demagogue; the ninth in a tyrant.

Now in all these incarnations he who lives righteously has a better lot for his portion, and he who lives unrighteously a worse. For a soul does not return to the place whence she came for ten thousand years, since in no lesser time can she regain her wings, save only his soul who has sought after wisdom unfeignedly, or has conjoined his passion for a loved one with that seeking. Such a soul, if

The Golden Chain

with three evolutions of a thousand years she has thrice chosen this philosophical life, regains thereby her wings, and speeds away after three thousand years; but the rest, when they have accomplished their first life, are brought to judgment, and after the judgment some are taken to be punished in places of chastisement beneath the earth, while others are borne aloft by Justice to a certain region of the heavens, there to live in such manner as is merited by their past life in the flesh. And after a thousand years these and those alike come to the allotment and choice of their second life, each choosing according to her will; then does the soul of a man enter into the life of a beast, and the beast's soul that was aforetime in a man goes back to a man again. For only the soul that has beheld truth may enter into this our human form—seeing that man must needs understand the language of forms, passing from a plurality of perceptions to a unity gathered together by reasoning—and such understanding is a recollection of those things which our souls beheld aforetime as they journeyed with their god, looking down upon the things which now we suppose to be, and gazing up to that which truly is.

Therefore is it meet and right that the soul of the philosopher alone should recover her wings, for she, so far as may be, is ever near in memory to those things a god's nearness whereunto makes him truly god. Wherefore if a man makes right use of such means of remembrance, and ever approaches to the full vision of the perfect mysteries, he and he alone becomes truly perfect. Standing aside from the busy doings of mankind, and drawing nigh to the divine, he is rebuked by the multitude as being out of his wits, for they know not that he is possessed by a deity.

Mark therefore the sum and substance of all our discourse touching the fourth sort of madness—to wit, that this is the best of all forms of divine possession, both in itself and in its sources, both for him that has it and for him that shares therein—and when he that loves beauty is touched by such madness he is called a lover. Such a one, as soon as he beholds the beauty of this world, is reminded of true beauty, and his wings begin to grow; then is he fain to lift his wings and fly upward; yet he has not the power, but inasmuch as he gazes upward like a bird, and cares nothing for the world beneath, men charge it upon him that he is demented.

Now, as we have said, every human soul has, by reason of her nature, had contemplation of true being; else would she never have

Plato: Philosophy as the Regrowth of Wings

entered into this human creature; but to be put in mind thereof by things here is not easy for every soul. Some, when they had the vision, had it but for a moment; some when they had fallen to earth consorted unhappily with such as led them to deeds of unrighteousness, wherefore they forgot the holy objects of their vision. Few indeed are left that can still remember much, but when these discern some likeness of the things yonder, they are amazed, and no longer masters of themselves, and know not what is come upon them by reason of their perception being dim.

Now in the earthly likenesses of justice and temperance and all other prized possessions of the soul there dwells no luster; nay, so dull are the organs wherewith men approach their images that hardly can a few behold that which is imaged, but with beauty it is otherwise. Beauty it was ours to see in all its brightness in those days when, amidst that happy company, we beheld with our eyes that blessed vision, ourselves in the train of Zeus, others following some other god; then were we all initiated into that mystery which is rightly accounted blessed beyond all others; whole and unblemished were we that did celebrate it, untouched by the evils that awaited us in days to come; whole and unblemished likewise, free from all alloy, steadfast and blissful were the spectacles on which we gazed in the moment of final revelation; pure was the light that shone around us, and pure were we, without taint of that prison house which now we are encompassed withal, and call a body, fast bound therein as an oyster in its shell.

There let it rest then, our tribute to a memory that has stirred us to linger awhile on those former joys for which we yearn. Now beauty, as we said, shone bright amidst these visions, and in this world below we apprehend it through the clearest of our senses, clear and resplendent. For sight is the keenest mode of perception vouchsafed us through the body; wisdom, indeed, we cannot see thereby—how passionate had been our desire for her, if she had granted us so clear an image of herself to gaze upon—nor yet any other of those beloved objects, save only beauty; for beauty alone this has been ordained, to be most manifest to sense and most lovely of them all.

Now he whose vision of the mystery is long past, or whose purity has been sullied, cannot pass swiftly hence to see beauty's self yonder, when he beholds that which is called beautiful here; wherefore he looks upon it with no reverence, and surrendering to pleasure

The Golden Chain

he essays to go after the fashion of a four-footed beast, and to beget offspring of the flesh, or consorting with wantonness he has no fear nor shame in running after unnatural pleasure. But when one who is fresh from the mystery, and saw much of the vision, beholds a godlike face or bodily form that truly expresses beauty, first there come upon him a shuddering and a measure of that awe which the vision inspired, and then reverence as at the sight of a god, and but for fear of being deemed a very madman he would offer sacrifice to his beloved, as to a holy image of deity. Next, with the passing of the shudder, a strange sweating and fever seizes him. For by reason of the stream of beauty entering in through his eyes there comes a warmth, whereby his soul's plumage is fostered, and with that warmth the roots of the wings are melted, which for long had been so hardened and closed up that nothing could grow; then as the nourishment is poured in, the stump of the wing swells and hastens to grow from the root over the whole substance of the soul, for aforesaid the whole soul was furnished with wings. Meanwhile she throbs with ferment in every part, and even as a teething child feels an aching and pain in its gums when a tooth has just come through, so does the soul of him who is beginning to grow his wings feel a ferment and painful irritation. Wherefore as she gazes upon the boy's beauty, she admits a flood of particles streaming therefrom—that is why we speak of a "flood of passion"—whereby she is warmed and fostered; then has she respite from her anguish, and is filled with joy. But when she has been parted from him and become parched, the openings of those outlets at which the wings are sprouting dry up likewise and are closed, so that the wing's germ is barred off. And behind its bars, together with the flood aforesaid, it throbs like a fevered pulse, and pricks at its proper outlet, and thereat the whole soul round about is stung and goaded into anguish; howbeit she remembers the beauty of her beloved, and rejoices again. So between joy and anguish she is distraught at being in such strange case, perplexed and frenzied; with madness upon her she can neither sleep by night nor keep still by day, but runs hither and thither, yearning for him in whom beauty dwells, if haply she may behold him. At last she does behold him, and lets the flood pour in upon her, releasing the imprisoned waters; then has she refreshment and respite from her stings and sufferings, and at that moment tastes a pleasure that is sweet beyond compare. Nor will she willingly give it up. Above all others does she esteem her beloved in his beauty;

Plato: Philosophy as the Regrowth of Wings

mother, brother, friends, she forgets them all. Nought does she reckon of losing worldly possessions through neglect. All the rules of conduct, all the graces of life, of which aforetime she was proud, she now disdains, welcoming a slave's estate and any couch where she may be suffered to lie down close beside her darling, for besides her reverence for the possessor of beauty she has found in him the only physician for her grievous suffering.

Hearken, fair boy to whom I speak. This is the experience that men term love (*eros*) but when you hear what the gods call it, you will probably smile at its strangeness. There are a couple of verses on love quoted by certain Homeric scholars from the unpublished works, the second of which is remarkably bold and a trifle astray in its quantities. They run as follows:

Eros, cleaver of air, in mortals' speech is he named,
But, since he must grow wings, Pteros the celestials call him.

You may believe that or not, as you please; at all events the cause and the nature of the lover's experience are in fact what I have said.

Now if he whom Love has caught be among the followers of Zeus, he is able to bear the burden of the winged one with some constancy, but they that attend upon Ares, and did range the heavens in his train, when they are caught by Love and fancy that their beloved is doing them some injury, will shed blood and not scruple to offer both themselves and their loved ones in sacrifice. And so does each lover live, after the manner of the god in whose company he once was, honoring him and copying him so far as may be, so long as he remains uncorrupt and is still living in his first earthly period, and in like manner does he comport himself toward his beloved and all his other associates. And so each selects a fair one for his love after his disposition, and even as if the beloved himself were a god he fashions for himself as it were an image, and adorns it to be the object of his veneration and worship.

Thus the followers of Zeus seek a beloved who is Zeus-like in soul; wherefore they look for one who is by nature disposed to the love of wisdom and the leading of men, and when they have found him and come to love him they do all in their power to foster that disposition. And if they have not aforetime trodden this path, they now set out upon it, learning the way from any source that may offer of finding it for themselves, and as they follow up the trace within

The Golden Chain

themselves of the nature of their own god their task is made easier, inasmuch as they are constrained to fix their gaze upon him, and reaching out after him in memory they are possessed by him, and from him they take their ways and manners of life, in so far as a man can partake of a god. But all this, mark you, they attribute to the beloved, and the draughts which they draw from Zeus they pour out, like bacchants, into the soul of the beloved, thus creating in him the closest possible likeness to the god they worship.

Those who were in the train of Hera look for a royal nature, and when they have found him they do unto him all things in like fashion. And so it is with the followers of Apollo and each other god. Every lover is fain that his beloved should be of a nature like to his own god, and when he has won him, he leads him on to walk in the ways of their god, and after his likeness, patterning himself thereupon and giving counsel and discipline to the boy. There is no jealousy or petty spitefulness in his dealings, but his every act is aimed at bringing the beloved to be every whit like unto himself and unto the god of their worship.

So therefore glorious and blissful is the endeavor of true lovers in that mystery rite, if they accomplish that which they endeavor after the fashion of which I speak, when mutual affection arises through the madness inspired by love.

iv. *Phaedo* 66b–69d

“All these considerations,” said Socrates, “must surely prompt serious philosophers to review the position in some such way as this. ‘It looks as though this were a bypath leading to the right track. So long as we keep to the body and our soul is contaminated with this imperfection, there is no chance of our ever attaining satisfactorily to our object, which we assert to be truth. In the first place, the body provides us with innumerable distractions in the pursuit of our necessary sustenance, and any diseases which attack us hinder our quest for reality. Besides, the body fills us with loves and desires and fears and all sorts of fancies and a great deal of nonsense, with the result that we literally never get an opportunity to think at all about anything. Wars and revolutions and battles are due simply and solely to the body and its desires. All wars are undertaken for the acqui-

Plato: Philosophy as the Regrowth of Wings

sition of wealth, and the reason why we have to acquire wealth is the body, because we are slaves in its service. That is why, on all these accounts, we have so little time for philosophy. Worst of all, if we do obtain any leisure from the body's claims and turn to some line of inquiry, the body intrudes once more into our investigations, interrupting, disturbing, distracting, and preventing us from getting a glimpse of the truth. We are in fact convinced that if we are ever to have pure knowledge of anything, we must get rid of the body and contemplate things by themselves with the soul by itself. It seems, to judge from the argument, that the wisdom which we desire and upon which we profess to have set our hearts will be attainable only when we are dead, and not in our lifetime. If no pure knowledge is possible in the company of the body, then either it is totally impossible to acquire knowledge, or it is only possible after death, because it is only then that the soul will be separate and independent of the body. It seems that so long as we are alive, we shall continue closest to knowledge if we avoid as much as we can all contact and association with the body, except when they are absolutely necessary, and instead of allowing ourselves to become infected with its nature, purify ourselves from it until God himself gives us deliverance. In this way, by keeping ourselves uncontaminated by the follies of the body, we shall probably reach the company of others like ourselves and gain direct knowledge of all that is pure and uncontaminated—that is, presumably, of truth. For one who is not pure himself to attain to the realm of purity would no doubt be a breach of universal justice.' Something to this effect, Simmias, is what I imagine all real lovers of learning must think themselves and say to one another. Don't you agree with me?"

"Most emphatically, Socrates."

"Very well, then," said Socrates, "if this is true, there is good reason for anyone who reaches the end of this journey which lies before me to hope that there, if anywhere, he will attain the object to which all our efforts have been directed during my past life. So this journey which is now ordained for me carries a happy prospect for any other man also who believes that his mind has been prepared by purification."

"It does indeed," said Simmias.

"And purification, as we saw some time ago in our discussion, consists in separating the soul as much as possible from the body,

The Golden Chain

and accustoming it to withdraw from all contact with the body and concentrate itself by itself, and to have its dwelling, so far as it can, both now and in the future, alone by itself, freed from the shackles of the body. Does not that follow?"

"Yes, it does," said Simmias.

"Is not what we call death a freeing and separation of soul from body?"

"Certainly," he said.

"And the desire to free the soul is found chiefly, or rather only, in the true philosopher. In fact the philosopher's occupation consists precisely in the freeing and separation of soul from body. Isn't that so?"

"Apparently."

"Well then, as I said at the beginning, if a man has trained himself throughout his life to live in a state as close as possible to death, would it not be ridiculous for him to be distressed when death comes to him?"

"It would, of course."

"Then it is a fact, Simmias, that true philosophers make dying their profession, and that to them of all men death is least alarming. Look at it in this way. If they are thoroughly dissatisfied with the body, and long to have their souls independent of it, when this happens would it not be entirely unreasonable to be frightened and distressed? Would they not naturally be glad to set out for the place where there is a prospect of attaining the object of their lifelong desire—which is wisdom—and of escaping from an unwelcome association? Surely there are many who have chosen of their own free will to follow dead lovers and wives and sons to the next world, in the hope of seeing and meeting there the persons whom they loved. If this is so, will a true lover of wisdom who has firmly grasped this same conviction—that he will never attain to wisdom worthy of the name elsewhere than in the next world—will he be grieved at dying? Will he not be glad to make that journey? We must suppose so, my dear boy; that is, if he is a real philosopher; because then he will be of the firm belief that he will never find wisdom in all its purity in any other place. If this is so, would it not be quite unreasonable, as I said just now, for such a man to be afraid of death?"

"It would, indeed."

"So if you see anyone distressed at the prospect of dying," said Socrates, "it will be proof enough that he is a lover not of wisdom

Plato: Philosophy as the Regrowth of Wings

but of the body. As a matter of fact, I suppose he is also a lover of wealth and reputation—one or the other, or both.”

“Yes, you are quite right.”

“Doesn’t it follow, Simmias,” he went on, “that the virtue which we call courage belongs primarily to the philosophical disposition?”

“Yes, no doubt it does,” he said.

“Self-control, too, as it is understood even in the popular sense—not being carried away by the desires, but preserving a decent indifference toward them—is not this appropriate only to those who regard the body with the greatest indifference and spend their lives in philosophy?”

“Certainly,” he said.

“If you care to consider courage and self-control as practiced by other people,” said Socrates, “you will find them illogical.”

“How so, Socrates?”

“You know, don’t you, that everyone except the philosopher regards death as a great evil?”

“Yes, indeed.”

“Isn’t it true that when a brave man faces death he does so through fear of something worse?”

“Yes, it is true.”

“So in everyone except the philosopher courage is due to fear and dread, although it is illogical that fear and cowardice should make a man brave.”

“Quite so.”

“What about temperate people? Is it not, in just the same way, a sort of self-indulgence that makes them self-controlled? We may say that this is impossible, but all the same those who practice this simple form of self-control are in much the same case as that which I have just described. They are afraid of losing other pleasures which they desire, so they refrain from one kind because they cannot resist the other. Although they define self-indulgence as the condition of being ruled by pleasure, it is really because they cannot resist some pleasures that they succeed in resisting others, which amounts to what I said just now—that they control themselves, in a sense, by self-indulgence.”

“Yes, that seems to be true.”

“I congratulate you on your perception, Simmias. No, I am afraid that, from the moral standpoint, it is not the right method to exchange one degree of pleasure or pain or fear for another, like

The Golden Chain

coins of different values. There is only one currency for which all these tokens of ours should be exchanged, and that is wisdom. In fact, it is wisdom that makes possible courage and self-control and integrity or, in a word, true goodness, and the presence or absence of pleasures and fears and other such feelings makes no difference at all, whereas a system of morality which is based on relative emotional values is a mere illusion, a thoroughly vulgar conception which has nothing sound in it and nothing true. The true moral ideal, whether self-control or integrity or courage, is really a kind of purgation from all these emotions, and wisdom itself is a sort of purification. Perhaps these people who direct the religious initiations are not so far from the mark, and all the time there has been an allegorical meaning beneath their doctrine that he who enters the next world uninitiated and unenlightened shall lie in the mire, but he who arrives there purified and enlightened shall dwell among the gods. You know how the initiation practitioners say, 'Many bear the emblems, but the devotees are few'?⁴ Well, in my opinion these devotees are simply those who have lived the philosophical life in the right way—a company which, all through my life, I have done my best in every way to join, leaving nothing undone which I could do to attain this end. Whether I was right in this ambition, and whether we have achieved anything, we shall know for certain, if God wills, when we reach the other world, and that, I imagine, will be fairly soon."

v. *Theaetetus* 155d–155e

SOCRATES: That shows that Theodorus was not wrong in his estimate of your nature. This sense of wonder is the mark of the philosopher. Philosophy indeed has no other origin, and he was a good genealogist who made Iris the daughter of Thaumias.

Do you now begin to see the explanation of all this which follows from the theory we are attributing to Protagoras? Or is it not yet clear?

THEAETETUS: I can't say it is yet.

SOCRATES: Then perhaps you will be grateful if I help you to pen-

4. Or: "Many are the narthex-bearers, but few are *bakchoi*" (*Phaed.* 69c; cf. *Orphicorum fragmenta* 5, 235). See Walter Burkert, *Ancient Mystery Cults* (Cambridge, Mass.: Harvard University Press, 1987), p.34.

Plato: Philosophy as the Regrowth of Wings

erate to the truth concealed in the thoughts of a man—or I should say, of men—of such distinction.

THEAETETUS: Of course I shall be very grateful.

SOCRATES: Then just take a look round and make sure that none of the uninitiated overhears us. I mean by the uninitiated the people who believe that nothing is real save what they can grasp with their hands and do not admit that actions or processes or anything invisible can count as real.

176a–177a

THEODORUS: If you could convince everyone, Socrates, as you convince me, there would be more peace and fewer evils in the world.

SOCRATES: Evils, Theodorus, can never be done away with, for the good must always have its contrary; nor have they any place in the divine world, but they must needs haunt this region of our mortal nature. That is why we should make all speed to take flight from this world to the other, and that means becoming like the divine so far as we can, and that again is to become righteous with the help of wisdom. But it is no such easy matter to convince men that the reasons for avoiding wickedness and seeking after goodness are not those which the world gives. The right motive is not that one should seem innocent and good—that is no better, to my thinking, than an old wives' tale—but let us state the truth in this way. In the divine there is no shadow of unrighteousness, only the perfection of righteousness, and nothing is more like the divine than any one of us who becomes as righteous as possible. It is here that a man shows his true spirit and power or lack of spirit and nothingness. For to know this is wisdom and excellence of the genuine sort; not to know it is to be manifestly blind and base. All other forms of seeming power and intelligence in the rulers of society are as mean and vulgar as the mechanic's skill in handicraft. If a man's words and deeds are unrighteous and profane, he had best not persuade himself that he is a great man because he sticks at nothing, glorying in his shame as such men do when they fancy what others say of them. They are no fools, no useless burdens to the earth, but men of the right sort to weather the storms of public life.

The Golden Chain

Let the truth be told. They are what they fancy they are not, all the more for deceiving themselves, for they are ignorant of the very thing it most concerns them to know—the penalty of injustice. This is not, as they imagine, stripes and death, which do not always fall on the wrongdoer, but a penalty that cannot be escaped.

THEODORUS: What penalty is that?

SOCRATES: There are two patterns, my friend, in the unchangeable nature of things, one of divine happiness, the other of godless misery—a truth to which their folly makes them utterly blind, unaware that in doing injustice they are growing less like one of these patterns and more like the other. The penalty they pay is the life they lead, answering to the pattern they resemble. But if we tell them that, unless they rid themselves of their superior cunning, that other region which is free from all evil will not receive them after death, but here on earth they will dwell for all time in some form of life resembling their own and in the society of things as evil as themselves, all this will sound like foolishness to such strong and unscrupulous minds.

vi. *Symposium* 201c–204b

“No, no, dear Agathon. It’s the truth you find unanswerable, not Socrates. And now I’m going to leave you in peace, because I want to talk about some lessons I was given, once upon a time, by a Mantinean woman called Diotima—a woman who was deeply versed in this and many other fields of knowledge. It was she who brought about a ten years’ postponement of the great plague of Athens on the occasion of a certain sacrifice, and it was she who taught me the philosophy of Love. And now I am going to try to connect her teaching—as well as I can without her help—with the conclusions that Agathon and I have just arrived at. Like him, I shall begin by stating who and what Love is, and go on to describe his functions, and I think the easiest way will be to adopt Diotima’s own method of inquiry by question and answer. I’d been telling her pretty much what Agathon has just been telling me—how Love was a great god, and how he was the love of what is beautiful, and she used the same arguments on me that I’ve just brought to bear on Agathon to prove that, on my own showing, Love was neither beautiful nor good.

Plato: Philosophy as the Regrowth of Wings

“Whereupon, my dear Diotima,’ I asked, ‘are you trying to make me believe that Love is bad and ugly?’

“Heaven forbid,’ she said. ‘But do you really think that if a thing isn’t beautiful it’s therefore bound to be ugly?’

“Why, naturally.’

“And that what isn’t learned must be ignorant? Have you never heard of something which comes between the two?’

“And what’s that?’

“Don’t you know,’ she asked, ‘that holding an opinion which is in fact correct, without being able to give a reason for it, is neither true knowledge—how can it be knowledge without a reason?—nor ignorance—for how can we call it ignorance when it happens to be true? So may we not say that a correct opinion comes midway between knowledge and ignorance?’

“Yes,’ I admitted, ‘that’s perfectly true.’

“Very well, then,’ she went on, ‘why must you insist that what isn’t beautiful is ugly, and that what isn’t good is bad? Now, coming back to Love, you’ve been forced to agree that he is neither good nor beautiful, but that’s no reason for thinking that he must be bad and ugly. The fact is that he’s between the two.’

“And yet,’ I said, ‘it’s generally agreed that he’s a great god.’

“It all depends,’ she said, ‘on what you mean by “generally.” Do you mean simply people that don’t know anything about it, or do you include the people that do?’

“I meant everybody.’

“At which she laughed, and said, ‘Then can you tell me, my dear Socrates, how people can agree that he’s a great god when they deny that he’s a god at all?’

“What people do you mean?’ I asked her.

“You for one, and I for another.’

“What on earth do you mean by that?’

“Oh, it’s simple enough,’ she answered. ‘Tell me, wouldn’t you say that all the gods were happy and beautiful? Or would you suggest that any of them were neither?’

“Good heavens, no!’ said I.

“And don’t you call people happy when they possess the beautiful and the good?’

“Why, of course.’

“And yet you agreed just now that Love lacks, and consequent-

The Golden Chain

ly longs for, those very qualities?’

“Yes, so I did.’

“Then, if he has no part in either goodness or beauty, how can he be a god?’

“I suppose he can’t be,’ I admitted.

“And now,’ she said, ‘haven’t I proved that you’re one of the people who don’t believe in the divinity of Love?’

“Yes, but what can he be, then?’ I asked her. ‘A mortal?’

“Not by any means.’

“Well, what then?’

“What I told you before—halfway between mortal and immortal.’

“And what do you mean by that, Diotima?’

“A very powerful spirit, Socrates, and spirits, you know, are halfway between god and man.’

“What powers have they, then?’ I asked.

“They are the envoys and interpreters that ply between heaven and earth, flying upward with our worship and our prayers, and descending with the heavenly answers and commandments, and since they are between the two estates they weld both sides together and merge them into one great whole. They form the medium of the prophetic arts, of the priestly rites of sacrifice, initiation, and incantation, of divination and of sorcery, for the divine will not mingle directly with the human, and it is only through the mediation of the spirit world that man can have any intercourse, whether waking or sleeping, with the gods. And the man who is versed in such matters is said to have spiritual powers, as opposed to the mechanical powers of the man who is expert in the more mundane arts. There are many spirits, and many kinds of spirits, too, and Love is one of them.’

“Then who were his parents?’ I asked.

“I’ll tell you,’ she said, ‘though it’s rather a long story. On the day of Aphrodite’s birth the gods were making merry, and among them was Resource, the son of Craft. And when they had supped, Need came begging at the door because there was good cheer inside. Now, it happened that Resource, having drunk deeply of the heavenly nectar—for this was before the days of wine—wandered out into the garden of Zeus and sank into a heavy sleep, and Need, thinking that to get a child by Resource would mitigate her penury,

Plato: Philosophy as the Regrowth of Wings

lay down beside him and in time was brought to bed of Love. So Love became the follower and servant of Aphrodite because he was begotten on the same day that she was born, and further, he was born to love the beautiful since Aphrodite is beautiful herself.

“Then again, as the son of Resource and Need, it has been his fate to be always needy; nor is he delicate and lovely as most of us believe, but harsh and arid, barefoot and homeless, sleeping on the naked earth, in doorways, or in the very streets beneath the stars of heaven, and always partaking of his mother’s poverty. But, secondly, he brings his father’s resourcefulness to his designs upon the beautiful and the good, for he is gallant, impetuous, and energetic, a mighty hunter, and a master of device and artifice—at once desirous and full of wisdom, a lifelong seeker after truth, an adept in sorcery, enchantment, and seduction.

“He is neither mortal nor immortal, for in the space of a day he will be now, when all goes well with him, alive and blooming, and now dying, to be born again by virtue of his father’s nature, while what he gains will always ebb away as fast. So Love is never altogether in or out of need, and stands, moreover, midway between ignorance and wisdom. You must understand that none of the gods are seekers after truth. They do not long for wisdom, because they are wise—and why should the wise be seeking the wisdom that is already theirs? Nor, for that matter, do the ignorant seek the truth or crave to be made wise. And indeed, what makes their case so hopeless is that, having neither beauty, nor goodness, nor intelligence, they are satisfied with what they are, and do not long for the virtues they have never missed.’

“Then tell me, Diotima,’ I said, ‘who are these seekers after truth, if they are neither the wise nor the ignorant?’

“Why, a schoolboy,’ she replied, ‘could have told you that, after what I’ve just been saying. They are those that come between the two, and one of them is Love. For wisdom is concerned with the loveliest of things, and Love is the love of what is lovely. And so it follows that Love is a lover of wisdom, and, being such, he is placed between wisdom and ignorance—for which his parentage also is responsible, in that his father is full of wisdom and resource, while his mother is devoid of either.’”

“So much I gathered, gentlemen, at one time and another from Diotima’s dissertations upon Love. And then one day she asked me, ‘Well, Socrates, and what do you suppose is the cause of all this longing and all this love? Haven’t you noticed what an extraordinary effect the breeding instinct has upon both animals and birds, and how obsessed they are with the desire, first to mate, and then to rear their litters and their broods, and how the weakest of them are ready to stand up to the strongest in defense of their young, and even die for them, and how they are content to bear the pinch of hunger and every kind of hardship, so long as they can rear their offspring?’

“‘With men,’ she went on, ‘you might put it down to the power of reason, but how can you account for Love’s having such remarkable effects upon the brutes? What do you say to that, Socrates?’

“Again I had to confess my ignorance.”

“‘Well,’ she said, ‘I don’t know how you can hope to master the philosophy of Love, if *that’s* too much for you to understand.’

“‘But, my dear Diotima,’ I protested, ‘as I said before, that’s just why I’m asking you to teach me—because I realize how ignorant I am. And I’d be more than grateful if you’d enlighten me as to the cause not only of this, but of all the various effects of Love.’

“‘Well,’ she said, ‘it’s simple enough, so long as you bear in mind what we agreed was the object of Love. For here, too, the principle holds good that the mortal does all it can to put on immortality. And how can it do that except by breeding, and thus ensuring that there will always be a younger generation to take the place of the old?’

“Now, although we speak of an individual as being the same so long as he continues to exist in the same form, and therefore assume that a man is the same person in his dotage as in his infancy, yet, for all we call him the same, every bit of him is different, and every day he is becoming a new man, while the old man is ceasing to exist, as you can see from his hair, his flesh, his bones, his blood, and all the rest of his body. And not only his body, for the same thing happens to his soul. And neither his manners, nor his disposition, nor his thoughts, nor his desires, nor his pleasures, nor his sufferings, nor his fears are the same throughout his life, for some of them grow, while others disappear.

Plato: Philosophy as the Regrowth of Wings

“And the application of this principle to human knowledge is even more remarkable, for not only do some of the things we know increase, while some of them are lost, so that even in our knowledge we are not always the same, but the principle applies as well to every single branch of knowledge. When we say we are studying, we really mean that our knowledge is ebbing away. We forget, because our knowledge disappears, and we have to study so as to replace what we are losing, so that the state of our knowledge may seem, at any rate, to be the same as it was before.

“This is how every mortal creature perpetuates itself. It cannot, like the divine, be still the same throughout eternity; it can only leave behind new life to fill the vacancy that is left in its species by obsolescence. This, my dear Socrates, is how the body and all else that is temporal partakes of the eternal; there is no other way. And so it is no wonder that every creature prizes its own issue, since the whole creation is inspired by this love, this passion for immortality.’

“Well, Diotima,’ I said, when she had done, ‘that’s a most impressive argument. I wonder if you’re right.’

“Of course I am,’ she said with an air of authority that was almost professorial. ‘Think of the ambitions of your fellow men, and though at first they may strike you as upsetting my argument, you’ll see how right I am if you only bear in mind that men’s great incentive is the love of glory, and that their one idea is “To win eternal mention in the deathless roll of fame.”

“For the sake of fame they will dare greater dangers, even, than for their children; they are ready to spend their money like water and to wear their fingers to the bone, and, if it comes to that, to die.

“Do you think,’ she went on, ‘that Alcestis would have laid down her life to save Admetus, or that Achilles would have died for the love he bore Patroclus, or that Codrus, the Athenian king, would have sacrificed himself for the seed of his royal consort, if they had not hoped to win “the deathless name for valor,” which, in fact, posterity has granted them? No, Socrates, no. Every one of us, no matter what he does, is longing for the endless fame, the incomparable glory that is theirs, and the nobler he is, the greater his ambition, because he is in love with the eternal.

“Well then,’ she went on, ‘those whose procreancy is of the body turn to woman as the object of their love, and raise a family, in the blessed hope that by doing so they will keep their memory

The Golden Chain

green, "through time and through eternity." But those whose procreancy is of the spirit rather than of the flesh—and they are not unknown, Socrates—conceive and bear the things of the spirit. And what are they? you ask. Wisdom and all her sister virtues; it is the office of every poet to beget them, and of every artist whom we may call creative.

"Now, by far the most important kind of wisdom,' she went on, 'is that which governs the ordering of society, and which goes by the names of justice and moderation. And if any man is so closely allied to the divine as to be teeming with these virtues even in his youth, and if, when he comes to manhood, his first ambition is to be begetting, he too, you may be sure, will go about in search of the loveliness—and never of the ugliness—on which he may beget. And hence his procreant nature is attracted by a comely body rather than an ill-favored one, and if, besides, he happens on a soul which is at once beautiful, distinguished, and agreeable, he is charmed to find so welcome an alliance. It will be easy for him to talk of virtue to such a listener, and to discuss what human goodness is and how the virtuous should live—in short, to undertake the other's education.

"And, as I believe, by constant association with so much beauty, and by thinking of his friend when he is present and when he is away, he will be delivered of the burden he has labored under all these years. And what is more, he and his friend will help each other rear the issue of their friendship—and so the bond between them will be more binding, and their communion even more complete than that which comes of bringing children up because they have created something lovelier and less mortal than human seed.

"And I ask you, who would not prefer such fatherhood to merely human propagation, if he stopped to think of Homer, and Hesiod, and all the greatest of our poets? Who would not envy them their immortal progeny, their claim upon the admiration of posterity?

"Or think of Lycurgus,' she went on, 'and what offspring he left behind him in his laws, which proved to be the saviors of Sparta and, perhaps, the whole of Hellas. Or think of the fame of Solon, the father of Athenian law, and think of all the other names that are remembered in Grecian cities and in lands beyond the sea for the noble deeds they did before the eyes of all the world, and for all the diverse virtues that they fathered. And think of all the shrines that

Plato: Philosophy as the Regrowth of Wings

have been dedicated to them in memory of their immortal issue, and tell me if you can think of *anyone* whose mortal children have brought him so much fame.

“Well now, my dear Socrates, I have no doubt that even you might be initiated into these, the more elementary mysteries of Love. But I don’t know whether you could apprehend the final revelation, for so far, you know, we are only at the bottom of the true scale of perfection.

“Never mind,’ she went on, ‘I will do all I can to help you understand, and you must strain every nerve to follow what I’m saying.

“Well then,’ she began, ‘the candidate for this initiation cannot, if his efforts are to be rewarded, begin too early to devote himself to the beauties of the body. First of all, if his preceptor instructs him as he should, he will fall in love with the beauty of one individual body, so that his passion may give life to noble discourse. Next he must consider how nearly related the beauty of any one body is to the beauty of any other, when he will see that if he is to devote himself to loveliness of form it will be absurd to deny that the beauty of each and every body is the same. Having reached this point, he must set himself to be the lover of every lovely body, and bring his passion for the one into due proportion by deeming it of little or of no importance.

“Next he must grasp that the beauties of the body are as nothing to the beauties of the soul, so that wherever he meets with spiritual loveliness, even in the husk of an unlovely body, he will find it beautiful enough to fall in love with and to cherish—and beautiful enough to quicken in his heart a longing for such discourse as tends toward the building of a noble nature. And from this he will be led to contemplate the beauty of laws and institutions. And when he discovers how nearly every kind of beauty is akin to every other he will conclude that the beauty of the body is not, after all, of so great moment.

“And next, his attention should be diverted from institutions to the sciences, so that he may know the beauty of every kind of knowledge. And thus, by scanning beauty’s wide horizon, he will be saved from a slavish and illiberal devotion to the individual loveliness of a single boy, a single man, or a single institution. And, turning his eyes toward the open sea of beauty, he will find in such contemplation the seed of the most fruitful discourse and the loftiest thought,

The Golden Chain

and reap a golden harvest of philosophy, until, confirmed and strengthened, he will come upon one single form of knowledge, the knowledge of the beauty I am about to speak of.

“And here,’ she said, ‘you must follow me as closely as you can. Whoever has been initiated so far in the mysteries of Love and has viewed all these aspects of the beautiful in due succession, is at last drawing near the final revelation. And now, Socrates, there bursts upon him that wondrous vision which is the very soul of the beauty he has toiled so long for. It is an everlasting loveliness which neither comes nor goes, which neither flowers nor fades, for such beauty is the same on every hand, the same then as now, here as there, this way, as that way, the same to every worshiper as it is to every other.

“Nor will his vision of the beautiful take the form of a face, or of hands, or of anything that is of the flesh. It will be neither words, nor knowledge, nor a something that exists in something else, such as a living creature, or the earth, or the heavens, or anything that is—but subsisting of itself and by itself in an eternal oneness, while every lovely thing partakes of it in such sort that, however much the parts may wax and wane, it will be neither more nor less, but still the same inviolable whole.

“And so, when his prescribed devotion to boyish beauties has carried our candidate so far that the universal beauty dawns upon his inward sight, he is almost within reach of the final revelation. And this is the way, the only way, he must approach, or be led toward, the sanctuary of Love. Starting from individual beauties, the quest for the universal beauty must find him ever mounting the heavenly ladder, stepping from rung to rung—that is, from one to two, and from two to *every* lovely body, from bodily beauty to the beauty of institutions, from institutions to learning, and from learning in general to the special lore that pertains to nothing but the beautiful itself—until at last he comes to know what beauty is.

“And if, my dear Socrates,’ Diotima went on, ‘man’s life is ever worth the living, it is when he has attained this vision of the very soul of beauty. And once you have seen it, you will never be seduced again by the charm of gold, of dress, of comely boys, or lads just ripening to manhood; you will care nothing for the beauties that used to take your breath away and kindle such a longing in you, and many others like you, Socrates, to be always at the side of the beloved and feasting your eyes upon him, so that you would be con-

Plato: Philosophy as the Regrowth of Wings

tent, if it were possible, to deny yourself the grosser necessities of meat and drink, so long as you were with him.

“But if it were given to man to gaze on beauty’s very self—unsullied, unalloyed, and freed from the mortal taint that haunts the frailer loveliness of flesh and blood—if, I say, it were given to man to see the heavenly beauty face to face, would you call his,’ she asked me, ‘an unenviable life, whose eyes had been opened to the vision, and who had gazed upon it in true contemplation until it had become his own forever?’

“And remember,’ she said, ‘that it is only when he discerns beauty itself through what makes it visible that a man will be quickened with the true, and not the seeming, virtue—for it is virtue’s self that quickens him, not virtue’s semblance. And when he has brought forth and reared this perfect virtue, he shall be called the friend of god, and if ever it is given to man to put on immortality, it shall be given to him.’

“This, Phaedrus—this, gentlemen—was the doctrine of Diotima. I was convinced, and in that conviction I try to bring others to the same creed, and to convince them that, if we are to make this gift our own, Love will help our mortal nature more than all the world. And this is why I say that every man of us should worship the god of Love, and this is why I cultivate and worship all the elements of Love myself, and bid others do the same. And all my life I shall pay the power and the might of Love such homage as I can. So you may call this my eulogy of Love, Phaedrus, if you choose; if not, well, call it what you like.”
